

BATORY FOODS®

Ingredients in Motion™

The sweet taste of success. Despite trends towards health and wellness, sales of chocolate and confections haven't faltered. In fact, confections recently charted a record \$33.6 billion in annual sales. Even though yearlong sales continue to be steady, there are four peak seasons within this category: Valentine's Day, Easter, Halloween, and the year-end holidays. For years, confectionery manufacturers have been successful introducing innovative products and expanding sales across multiple channels. Although grocery sales are highest, other channels, from vending machines to online sales, contributed to the upward trend. Predictably, consumers have a sweet tooth for new and nostalgic candy concoctions.

CANDY & CONFECTIONERY CATEGORIES

Acidulants

Acids
Citrates
